

PATIENT HEALTH RECORD ACCESS SYSTEM

Abstract of the Disclosure

- 5 An integrated system provides patients with secure, real-time access to their
Personal Health Record and an Enterprise Health Information System (PHR and
EHIS, respectively). Access may be provided by way of the Internet and via a
Personal Health Portal (PHP) web page. From the secure PHP web page, patients can
view information created and maintained by their health care providers and their
10 affiliated staff. The patients can also request services and information from their
health care providers and affiliated staff, directly access EHIS-related services, such
as scheduling an appointment, scheduling, paying a bill, enrolling in a class,
completing insurance and other forms, and viewing information and Internet services
that are relevant to their particular health status.
